Gerald,

I don't think you need approval unless it is a rush. You are under the 10,000 nucleotide limit.

Jeff

Hi Jeff, please approve the following searches for this application. Total nucleic acid length is ~7 kb. SEQ ID NO: 1 (3.2kb), SEQ ID NO: 2 (357 nts), SEQ ID NO: 3 (2.8 kb), SEQ ID NO: 5 (159 nts). Claims drawn to 30 contiguous nucleotides of SEQ ID NOS: 3 & 5; 300 contiguous nucleotides of SEQ ID NO: 1. Other claims to nucleic acids comprising all of SEQ ID NO: 1 or SEQ ID NO: 2. Thanks, Gerry Leffers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ĩ                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0:07                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1997                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŝ

On Jan 15, 2002 this sequence version replaced glightable.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping cloue ranne. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submission only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         linear PRI 11-JAN-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequencing vector: M1: M77815; 100% of reads Sequencing vector: M1: M77815; 100% of reads Assembly program: Phrap: version 0.966731 (Consensus quality: 117571 bases at leas: 04) Consensus quality: 117574 bases at leas: 04) Consensus quality: 169440 bases at leas: 020 consensus quality: 169440 bases at leas: 020 linear size: 185000; agarose : 19 linear size: 185000; agarose : 19 linear size: 171264; sum-of cont.as quality coverage: 2.9 in Q20 bases; sus-of-contique outlity coverage: 3.2 in Q20 bases; sus-of-contique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Center code: WIBR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling as useful to identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequence to completion. In the event that the record is updated, the accession comber will in
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Web site: http://www-seg.wl.mit.edu

arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pleces is not known and their order in this sequence lecord is Quality coverage: 3.2 in Q20 bases; sum-of-contigs 185: gap of 100 by 100 by 986: contig of 1994 bp in length 979: gap of 100 bp 986: contig of 1707 bp in length 12253: contig of 2467 bp in length 12353: gap of 100 bp 11353: gap of 100 bp 15353: gap of 100 bp 160 p of 100 bp in length p of 1270 bp in length p of 100 bp contig of 1994 bp in length p of 100 bp in length contig of 1707 bp in length 221: gap of 100 bp 22587: contig of 2356 bp in length 587: gap of 100 bp 1003: contig of 1003 bp in length 1004 1103: gap of 100 bp 1104 2634: contig of 1531 bp in length 2635 2734: gap of 100 bp 2635 2734: gap of 100 bp of 100 tp contig of 1681 bp in length 28284: gap of 100 bp 31338: contig of 3054 bp in length 31438: gap of 100 bp 34299: contig of 2861 bp in length 99: gap of 100 bp 38318: contig of 3919 bp in length 38418: gap of 100 bp 42835: contig of 4417 bp in length 45548: gap of 100 bp 48116: contig of 2568 bp in length 48216: gap of 100 bp 52618: contig of 4402 bp in length 18: gap of 100 bp 56592: contig of 3874 bp in length 56692: gap of 100 tp 59635: contig of 2943 bp in length 63761: gap of 100 bp 68437: contig of 4676 bp in length 68537: gap of 100 bp 71458: contig of 2921 bp in length ap of 100 bp contig of 5330 bp in length 76988: gap of 100 bp 82113: contig of 5125 bp in length 82213: gap of 100 bp 88220: contig of 6067 bp in length 120: gap of 100 bp 93499: contig of 5179 bp in length 17300: gap of 100 bp 20131: contig of 2831 bp in length 42935: gap of 100 bp 45448: contig of 2513 bp in length 35: qap of 100 bp 63661: contig of 3926 bp in length p of 100 bp contig of 4302 bp in length 103116: gap of 100 bp 109178: contig of 6062 bp 100 bp. f 5015 bp 100 bp 98001: gap of 1 103016: contig of gap of gap of 4415: con 4515: gap of 5785: con 97901: 76888: 12353: 15328: 25807: 52718: 20231: 59735: 71558: 93599: 34399: 9826 5885: 7979: 22687 31339 34300 20132

Perteilano, K. Johnson, M. Doyle, M. Fenestor, J. Galagan, J. Ferretia, P. Fitzhugh, M., Forrest, C., Gage, D., Galagan, J., Gardyana, S., Grant, G., Hagos, B., Heafroid, A., Horton, L., Howland, J.C., Johnson, R., Jones, C., Kann, L., Karatas, A., Klein, J., Landers, T., Lehoczky, J., Levine, R., Lieu, C., Liu, G., Locke, K., Macdonald, P., Marquis, N., McEwan, P., McGurk, A., McKernan, K., McPhotters, R., Meldrim, J., Meneus, L., Morrow, J., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., Olivar, T.M., Peterson, K., Plerre, N., Pisani, C., Pollara, V., Raymond, C., Riley, R., Rothman, D., Sto, A., Santos, R., Severy, P., Spencer, B., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Teafaye, S., Theodore, J., Tirrell, A., Vassiliev, H., Viel, R., Vo, A., Wu, X., Wyman, D., Ye, W.J., Limmer A. and Zody, M.

Direct Submission

Submitted (16-JAN-2000) Whitehead Institute/MIT Center for Genome
Research, 320 Charles Street, Cambridge, MA 02141, USA

On Jul 13, 2000 this sequence version replaced g1:6705871.

All repeats were identified using RepeatMasker:

Smit, A.F.A. & Green, P. (1996-1997)

http://ftp.gucnome.washington.edu/RM/RepeatMasker.html Center: Whitehead Institute/ MIT Center for Genome Research contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be generich and allows overlap relationships among clones to be deduced. NOTE: This record contains 73 individual sequencing reads that have not been assembled into However, it should not be assumed that this clone will be sequenced to completion. In the event that Collymore, A., the record is updated, the accession number will Jap of 100 bp in length 2: contig of 846 bp in length 2: contig of 880 bp in length 3ap of 100 bp in length 3: contig of 878 bp in length 100 bp in length contig of 841 bp in length of 100 bp routig of 851 bp in length contig of 851 bp in length gap of 100 bp 1834: contig of 863 bp in length 1: gap of 100 bp 2804: contig of 870 bp in length 100 bp f 870 bp in length 41: qap of 100 bp 15196: contiq of 855 bp in length 96: qap of 100 bp 871: contig of 871 bp in length 800 bp in length in length contig of 846 bp in length 100 bp of 844 bp in l 100 bp of 851 bp in L 00 bp i 14241: contig of 851 bp 100 bp 100 bp 100 contig of contig of contig of contig of contig of 176: gap of 11322: cont 14380: dap of 14 841: 4ap of gap of gap of 6640: gap of 7509: cor dap of gap of 5740: gap of 7609: gap of 8579: gap of gap of gap of 971: gap of Cent.er code: WIBR 9430: 4696 5640: 6540: 8479: 10376: 11323 11422: qap 11423 - 12302: 3745: 1 1280 2303 12402: 10476: 4796: 2904: 3845: 1934: 9530: be preserved 872 972 1835 1935 2805 3746 7510 7610 8480 10 177 1177 2905 1845 4697 4797 5641 6541 0838 10477 6641

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is compiletely arbitrary. Low pass sequence sampling is estimitual identifying clones that may be generich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Contact: sequence_submissions%genome.wi.mit.edu
